

# TOURISM WORLD INVESTMENT (TWI)

---

## Unified Global Economic and Commercial Asset for Digital Services and Assets

### 1. Executive Summary and Legal Identity

- **Project Concept:** A leading global investment platform aimed at reshaping the concepts of investment, trade, and service exchange through Real-World Asset (RWA) Tokenization, alongside the issuance of integrated digital arms combining cryptocurrencies and NFTs under the Tourism World Investment (TWI) umbrella.
- **Issuing Company:** A company legally registered in the United States — Washington State (Petra Coin LLC).
- **Operational Arm and Owner Group:** 100JORDAN Group and various international strategic partners (PROJECT\_OWNER\_GROUP = "100JORDAN").
- **Economic Nature (Important Clarification):** We affirm to all participants that TWI tokens and their affiliated digital arms are not securities or traditional debt instruments, but rather a tokenized participation model in a global economic project and real commercial and service activity aimed at providing high digital liquidity tied to the stability of tangible physical assets.

### 2. Electronic and Technical Arms of the Project (Tokens & NFTs)

The project relies on an advanced hybrid digital ecosystem to bridge the real economy with the digital environment through:

- **Cryptocurrencies (Tokens):** Includes core TWI tokens powered by secure smart contracts, used as a global medium of exchange, payments, trading, and securing immediate liquidity across centralized and decentralized trading platforms.
- **Non-Fungible Tokens (NFTs):** Utilizing NFT technology to represent fractional digital ownership of real-world assets and real estate (RWA to represent verified ownership shares), in addition to issuing exclusive loyalty cards, tourist residency certificates, and tickets for premium events and services associated with the global ecosystem.

### 3. Hybrid Economic Model and Asset Valuation (Global RWA Price Index)

Under the Tourism World Investment umbrella, the project relies on a multi-layered real asset index that determines the Value Floor to protect the value of tokens and digital assets and prevent random volatility on a global scale:

- **20% Global Gold Price:** Hedging against inflation through real-time linkage to global gold prices using Chainlink Oracles.
- **30% Regional and International Markets and Services Index:** A composite index tracking trade flows, global market movements, and economic project returns across target markets.
- **40% Global Activities and Services Index:** Monitoring international trade activity, service flows, and the global business sector.
- **10% Group Ecosystem Profits:** Profits directly tied to the group's operational projects and infrastructure worldwide.

### 4. Core Utility and Use Cases

- **Cryptocurrency Payment Services:** Empowering service providers, commercial activities, and tourism businesses worldwide to operate within the blockchain system, benefiting from direct cryptocurrency payment options and crypto wallets with flexibility and ease.
- **Infrastructure and Asset Tokenization (RWA & NFTs):** Enabling fractional digital ownership and sustainable financing of economic, real estate, and commercial projects globally through digital token verification.
- **Shopping, Buying, and Selling Services:** Providing an integrated ecosystem for purchasing goods and services, completing transactions in stores, projects, and commercial agencies using cryptocurrencies as a payment tool, via digital payment cards issued by approved platforms and networks such as Binance, MetaMask, Mastercard, and Visa.

### 5. Investment Stages and Capital Collection Structure (Programmatic and Financial)

---

The project is currently operating in its capital-raising phase. The total project ceiling of \$20,000,000 (20 million USDT) has been divided into 4 sequential investment stages via the smart contract, with each stage capped at \$5,000,000 and a maximum individual investment limit of 5,000,000 units:

- **Phase 1 (Current Phase):** \$5 million USDT ceiling, the currently active stage for raising capital, initiating the construction of initial operational assets, and launching digital arms.
- **Phase 2:** \$5 million USDT ceiling, involving preparations for global platforms, commercial and tourism services, asset and real estate acquisitions, and expanding crypto acceptance scope.
- **Phase 3:** \$5 million USDT ceiling to expand global operational scale and increase asset backing.
- **Phase 4 (Final Phase):** \$5 million USDT ceiling; upon completion, the project reaches its TOTAL\_CAP to trigger the ProjectCompleted event.

## 6. Estimated Budget, Cost Structure, and Financial Performance

- **Establishment and Global Legal Compliance (\$450,000):** Covers licensing, financial governance, and compliance with banks and international regulations.
- **Technical Development and Platforms (\$850,000):** Allocated for building TWI smart contracts, trading platform, crypto and NFT infrastructure, and AI engines.
- **Gold Reserve Backing (\$2,000,000):** Securing a 20% physical reserve to guarantee the minimum intrinsic value floor.
- **Global Marketing and Outreach (\$650,000):** Building an international partnership network and campaigns to attract global investors and participants.

### Target Financial Performance:

- **Internal Rate of Return (IRR):** Ranging between 18% and 25% annually, driven by the growth and cash flows of operational, real estate, and commercial assets.
- **Periodic Dividend Distributions:** 30% of net profits distributed as cash shares derived from service revenues, projects, and fees.
- **Target Daily Trading Volume:** \$85,000,000 USD by the third year of global operations.

## 7. Technical Architecture and Verified Blockchain Contracts

To ensure absolute transparency and instant verification of all network operations, the project relies on an integrated technical ecosystem:

- **Main Investment Smart Contract:**  
Address: 0x84D884c22e16d0D4fDf143b6718fFDDEb5a219f0  
Verification: Routerscan Verified Contract
- **Digital Arms and Tokens:**
  - Main Ecosystem Token (PetraCoin / TWI): 0x543963b6Ca737c079Edc76E51A9F54833fC05fBF
  - Supporting Digital Token (Jordan Digital Token - JODT): 0x6Fc15c55DD50BDffFF9aCa8CB1604bF884477961
- **Digital Asset Contracts and Ownership Deeds (NFTs & RWA):**
  - Crowdfunding and Partnership Contract (RWA): 0x7A920e7b444D21F66d6B08c58AE75CaACe3a46c2
  - Digital Ownership Deed Model (NFT): Etherscan Verified NFT
- **Technical Interaction:** Supports direct integration with Web3 digital wallets (MetaMask, WalletConnect).

## 8. Global Institutional Roadmap (Phased Roadmap)

- **Phase 1 (Months 0-6):** Launching smart contracts and digital arms (Tokens & NFTs) on Ethereum, completing security audits, and initiating regulatory dialogue.
- **Phase 2:** Commencing preparations for global platforms, commercial services, asset/real estate acquisitions, and activating smart payment gateways.
- **Phase 3:** Listing cross-border real and commercial assets via RWA technology, and expanding into regional and global markets.
- **Phase 4:** Broad adoption and official recognition as an approved digital financial and economic tool.
